Overview

BC Renal offers a Research Fellowship as part of our mandate to facilitate training and mentoring of clinicians and researchers and to encourage local, national and international collaboration, with the end goal of supporting high-calibre kidney research and knowledge translation that informs better care and treatment of patients. Research projects undertaken by successful applicants can span the continuum of kidney disease and can include observational analysis, prediction modeling, clinical trials, health services analysis, and biomarker and translational studies. Successful applicants take on a range of activities, including leadership of projects, development of research protocols and analysis plans, preparation of manuscripts, and development of grant applications.

BC Renal and the UBC Division of Nephrology Fellowship Program oversee the application process, including interviews and selection of successful applicants. Fellows are supervised by BC Renal and the UBC Division of Nephrology affiliated principal investigator(s).

The fellow and reporting supervisor will create the curriculum based on BC Renal priorities, as well as the fellow's interests wherever possible. The research project will reflect the collaboration between the applicable BC Renal provincial modality committees and the principal investigators within the UBC Division of Nephrology.

Eligibility

- Completion of accredited training in nephrology or nephrology related discipline programs (e.g. pharmacy, nutrition, social work, nursing).
- Completion of a Master's or PhD in clinical epidemiology, statistics, or a relevant field, or equivalent; or intention to enrol in courses.
- Completion of research training with a proven record of scholarly academic research achievement and peer-reviewed publications.
- If the applicant is a physician and intends on doing clinical work during the fellowship, then they will also need to meet the English Language requirements as below, and have graduated from medical school within 10 years of starting the fellowship. This clinical work would consume no more than 20% of time.

College of Physicians and Surgeons of BC English Language Requirement for Registration:

The College has considered in the interest of patient care, any candidate applying for licensure in British Columbia must have the ability to speak, read, and write, English. If the language of primary medical education and patient care was not in English the successful completion of [IELTS Academic examination](#) is required.

- Minimum score of 7 in each component.
- Test Report Form (TFR) is valid for a period of two years from date taken.

Deliverables

The Fellow is expected to complete the following activities to gain exposure to the renal network and raise awareness of policy implications and health services from their research work:

- Develop a research program of work with the supervisor (Research supervisor), with identified clinical content co-supervisor if/as appropriate; for review and vetting.
- Work with the statistical and analytic team at BC Kidney Research Unit, engaged in analytic and project planning rounds.
- Attend applicable BC Renal provincial modality committees in order to identify opportunities to develop research programs based on committee data and requirements.
- Attend and present BC Renal/UBC Province-wide Rounds (at least once per year), hospital academic rounds, and biopsy rounds.
- Participate and present (if applicable) in BC Kidney Days, BC Renal's annual conference, including submission of an abstract and development of a poster to support knowledge sharing/translation related to the fellow's research project(s).
- Contribute an article to the BC Renal network newsletter, Renal News.
- Submit a comprehensive report at the conclusion of the fellowship.
