

YOUR VOICE *matters!*

➔ *Become a
patient partner*

BCRenal

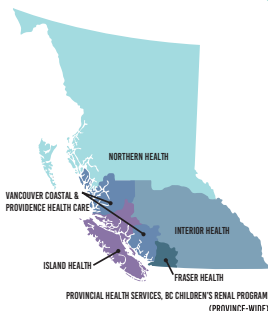

Provincial Health Services Authority

How we serve BC

BC Renal plans and monitors the delivery of kidney care services in BC. Our network is part of the Provincial Health Services

Authority. It includes health care professionals, researchers, patients and families working together for better kidney health.

You can make a difference

We involve patients and families as “patient partners” in various ways. This includes design, planning, implementation and evaluation of kidney care services. Together, we work with the vision for people with kidney disease in BC to have access to the highest quality, person-centred care that enables them to live their lives to the fullest.

You can be a patient partner if you...

- **Have lived experience with (or are at risk of) kidney disease**
- **Are interested in making a difference in kidney care**
- **Are open to sharing your experience and working with health care professionals and other partners**

We will support you

All our patient partners receive orientation, training, and ongoing support to ensure their contributions are meaningful and have impact.
