

HD Catheter Reason Incidence Report: Entry of Reasons & PROMIS Report

Aug 17, 2023

Purpose of report:

Identifies the specific reason for a catheter on the day of the first run on chronic HD (dialysis status = PRA, chronic renal failure, acute/short term/ long term dialysis). Includes all patients starting chronic HD using a catheter during the specified period.

Note:

The VA Incidence Report identifies patients starting chronic HD using a fistula, graft, or catheter during the defined period. It divides the catheter reasons into ST vs LT (but doesn't breakdown the specific ST and LT reasons – the latter is only found on the HD Catheter Reason Incidence Report).

Data entry:

If the first run on chronic HD is at the same time the catheter is placed:

- Utilize the Procedure screen and enter Create New, Access Status = “First Use” & the Procedure Reason.
- The catheter reason on the HD Catheter Reason Incidence Report will be pulled from the Procedure Reason.

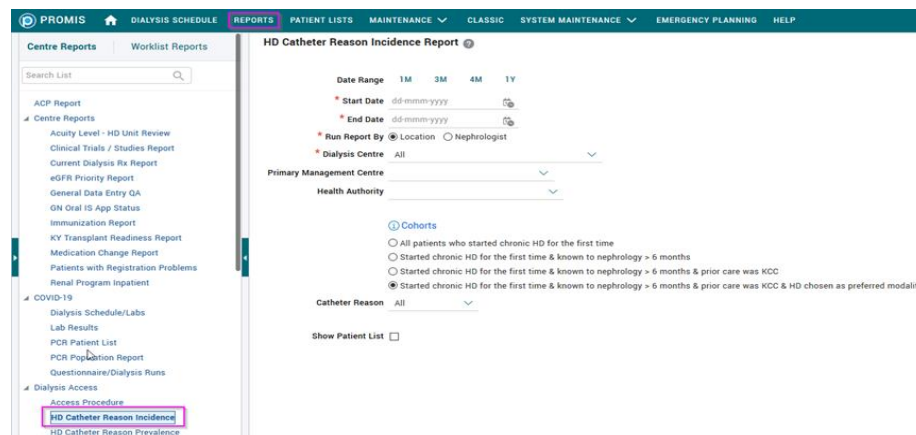

If the first run on chronic HD was sometime after the catheter was placed:

- First acute run: Utilize the Procedure screen and enter Create New, Access Status = “First Use” & the Procedure Reason.
- First chronic run: Utilize the Assessment screen and identify the Access Status = “In Use” & the Catheter Reason at the time of the first run on chronic HD. If the reason is the same as that identified when the catheter was inserted (Procedure screen), the catheter reason can be left blank if the appropriate reason is not on the dropdown list. Reasons not on the dropdown list on the Assessment screen include:
 - No previous nephrology care
 - Nephrology care, no modality education, no decision
 - Nephrology care, modality education, no decision
 - Modality decision = HD, no access plan
 - Late change in treatment decision, no access plan

How is catheter reason pulled for the HD Catheter Reason Incidence Report in PROMIS?

The catheter reason on the HD Catheter Reason Incidence Report is pulled from the Assessment screen (if completed) or Procedure screen (if catheter reason on the Assessment screen is left blank).

Sample HD Catheter Reason Incidence Report

The screenshot shows the PROMIS interface for the HD Catheter Reason Incidence Report. The left sidebar contains a navigation menu with 'HD Catheter Reason Incidence' selected. The main panel displays the following filters and options:

- Date Range:** 1M, 3M, 4M, 1Y
- Start Date:** dd-mm-yyyy
- End Date:** dd-mm-yyyy
- Run Report By:** Location Nephrologist
- Dialysis Centre:** All
- Primary Management Centre:** [Dropdown]
- Health Authority:** [Dropdown]
- Cohorts:**
 - All patients who started chronic HD for the first time
 - Started chronic HD for the first time & known to nephrology > 6 months
 - Started chronic HD for the first time & known to nephrology > 6 months & prior care was KCC
 - Started chronic HD for the first time & known to nephrology > 6 months & prior care was KCC & HD chosen as preferred modality
- Catheter Reason:** All
- Show Patient List:**
